Version 1/August 2016

Frey&Winkler's key business is the production of nose pads, mainly in silicone and PVC. However, there are also applications where nose pads made of other material are useful as an alternative.

We offer a wide selection of titanium pads with round, square and oval shapes, in both click and screw-type. Apart from a smooth-polished surface, you can choose between sandblasted surface or even different surface structures and/or a personalisation by laser engraving.

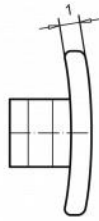

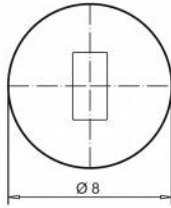

In order to achieve a wider range of design for trendsetting frames, F&W launched a stainless steel series which can be altered in colour using galvanization technique!

**100% Made in Germany in our own facilities
and with tested materials only**
